

What if your Child Could Change the Future?

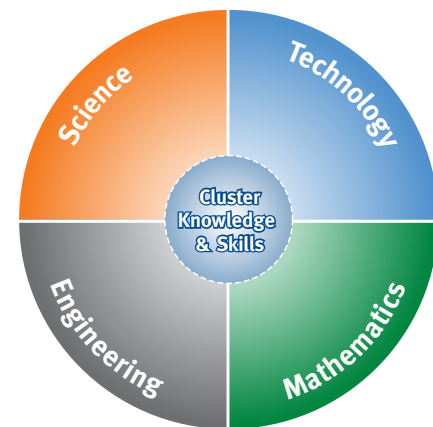

Then STEM may be in his or her future. The STEM (Science, Technology, Engineering & Math) cluster is more than a very rewarding career, it also offers some of the highest paying job salaries in the market. Plus, since these careers are so cutting-edge, the demand for STEM professionals is growing by leaps and bounds every day.

If your child chooses a career in STEM, they could be a part of:

- Working with “cutting edge” technologies
- Helping create new sources of energy and protecting the environment
- Helping create new medicines to aid and cure diseases
- Keeping our state and our country safe and secure
- Creating and changing the future in a variety of fields, from construction to medicine to technology

If being a part of STEM sounds appealing to your child, talk with your child’s guidance counselor or career specialist for more information about how to get him or her involved with “changing the future” now!
